التاريخ / DATE
[DD MONTH 2026]

رقم الشهادة / CERTIFICATE ID
LLM4Y-2026-C1-[NNN]

التحقق / VERIFY
[QR CODE PLACEHOLDER]
fadhlyemen.github.io/llm4yemen/verify/[ID]

How to Use This Certificate Template

This document contains both a single-page landscape certificate (page 1) and these instructions (page 2 onward). Print or export only page 1 for the student-facing certificate.

Customizing for each student

Replace these 4 placeholders before generating each student's certificate:

[STUDENT NAME / اسم الطالب]: the student's full name (bilingual preferred).

[TRACK / المسار]: "Track A — AI Power User" or "Track B — AI Builder" (English + Arabic).

[DD MONTH 2026]: the actual completion date — typically the Saturday of Week 6.

[NNN]: a sequential number from 001 to 015 for Cohort 1 (e.g., LLM4Y-2026-C1-007).

The QR code

The QR code links to a public verification page. To set this up:

Build a verification page at [fadhlyemen.github.io/llm4yemen/verify/\[ID\].html](https://fadhlyemen.github.io/llm4yemen/verify/[ID].html) for each student.

That page contains: the student's full name, completion date, track, and a confirmation that they completed the program.

Generate the QR code at <https://www.qr-code-generator.com> pointing to that URL.

Replace [QR CODE PLACEHOLDER] in the certificate with the generated QR image.

Verification page template

For each student, create a simple HTML page like this (save as `verify/[ID].html` in your repo):

```
<!DOCTYPE html>
<html>
<head><title>Certificate Verified · LLM4Yemen</title></head>
<body style="font-family: sans-serif; max-width: 600px; margin: 60px auto; text-align: center;">
  <h1 style="color: #1B3A5C;">✓ Certificate Verified</h1>
  <p>This certificate is genuine.</p>
  <p><strong>Issued to:</strong> [Student Name]</p>
  <p><strong>Track:</strong> [A or B]</p>
  <p><strong>Issued on:</strong> [Date]</p>
  <p><strong>Certificate ID:</strong> LLM4Y-2026-C1- [NNN]</p>
</body></html>
```

Production workflow

Open this DOCX in Word.

Replace the 4 placeholders for each student.

Insert the generated QR code in place of [QR CODE PLACEHOLDER].

Export to PDF (File → Export → Create PDF).

Email the PDF to the student. Optionally print one copy on heavy paper for the student to keep.

Bulk generation tip

If you have 15+ students per cohort, use Word's Mail Merge feature with a CSV containing: student_name, track, date, cert_id, qr_image_path. This generates all 15 certificates in one batch.

Design notes

Landscape A4 — 297mm × 210mm. Looks best printed on 200gsm or heavier paper.

Gold (#C9A84C) double border, navy (#1B3A5C) headings.

Fully bilingual layout. Arabic name displayed alongside English name.

Four instructor signatures, ordered by program role.

If you change the certificate later

Keep the design identity (gold/navy, Amiri/Calibri fonts, double border) consistent across cohorts.

Update the certificate ID format if you change cohort numbering (LLM4Y-2027-C3-NNN, etc.).

Past cohorts' certificates remain valid even if the design evolves — the verification page is the source of truth.
